

At Berkeley Scott, we are actively working towards a more sustainable future by encouraging greener commuting practices across our temp workforce. As part of our commitment, we recently conducted an internal survey to better understand current commuting behaviours and assess willingness to adopt more environmentally friendly alternatives.

Use sustainable methods of transport including: public transport, cycling or walking.

Of those surveyed, have said they would consider alternative, more sustainable travel options if they were available or if they were safer.

8% of our workforce either walk or cycle

Of the 21% that use their car to travel to work; 68% of these say they would use a more sustainable, greener method of transport, but currently, public transport in their location is not compatible with working hours or work location.

## *Sustainability is our priority*

As a leading recruitment partner in the hospitality sector, we recognise our role in promoting sustainable practices not just within our own operations, but across the industry we serve. This includes initiatives specifically focused on our temporary workforce, for whom we have tailored sustainability efforts.

From reducing our environmental footprint to championing greener choices among our staff and clients, we are committed to embedding sustainability into the heart of our business. Whether it's through smarter commuting, digital-first practices, or supporting clients with their own ESG goals, we are dedicated to contributing to a more responsible and sustainable future for hospitality.
